

BBTECH INC.

Logo Standards - Proof Edition

Axe as the T. ECH remains the wordmark. INC is centered beneath the wordmark.

1. Primary Identity

Use this as the default BBTECH Inc. identity. The axe functions as the T, followed by ECH. The artwork shown here defines the proof: axe geometry, ECH lettering, relative scale, baseline, spacing, and centered INC treatment.

Do not add a separate T before ECH.

2. Standalone Mark

Use the standalone axe where the company name is already understood, including avatars, app icons, favicons, product marks, engraving, and small-format applications.

3. One-Color Treatments

Approved treatments are black on white and reversed white on black. The geometry and proportions stay identical.

WHITE ON BLACK

4. Clear Space

Keep surrounding text, graphics, and page edges away from the logo. Use at least one E-height of clear space around the full lockup. For the standalone axe, use at least the width of the central shaft on every side.

5. Minimum Size

Use the full lockup only when ECH and INC remain clearly readable. For small digital uses, switch to the standalone axe rather than forcing the full lockup into favicon-size spaces.

6. Usage Rules

Keep: the axe geometry, ECH lettering, relative scale, baseline, spacing, and centered INC treatment exactly as shown in the approved master.

Do not: add a separate T, place ECH over the axe blade, stretch or skew the mark, change the type style, alter the blade geometry, add gradients, shadows, outlines, or extra colors.

Production package after approval

After you approve this proof, the production package will derive from this exact master and include vector masters, transparent PNGs, black-on-white and white-on-black versions, multiple digital sizes, app icons, and favicons.
